Vulnerability Report

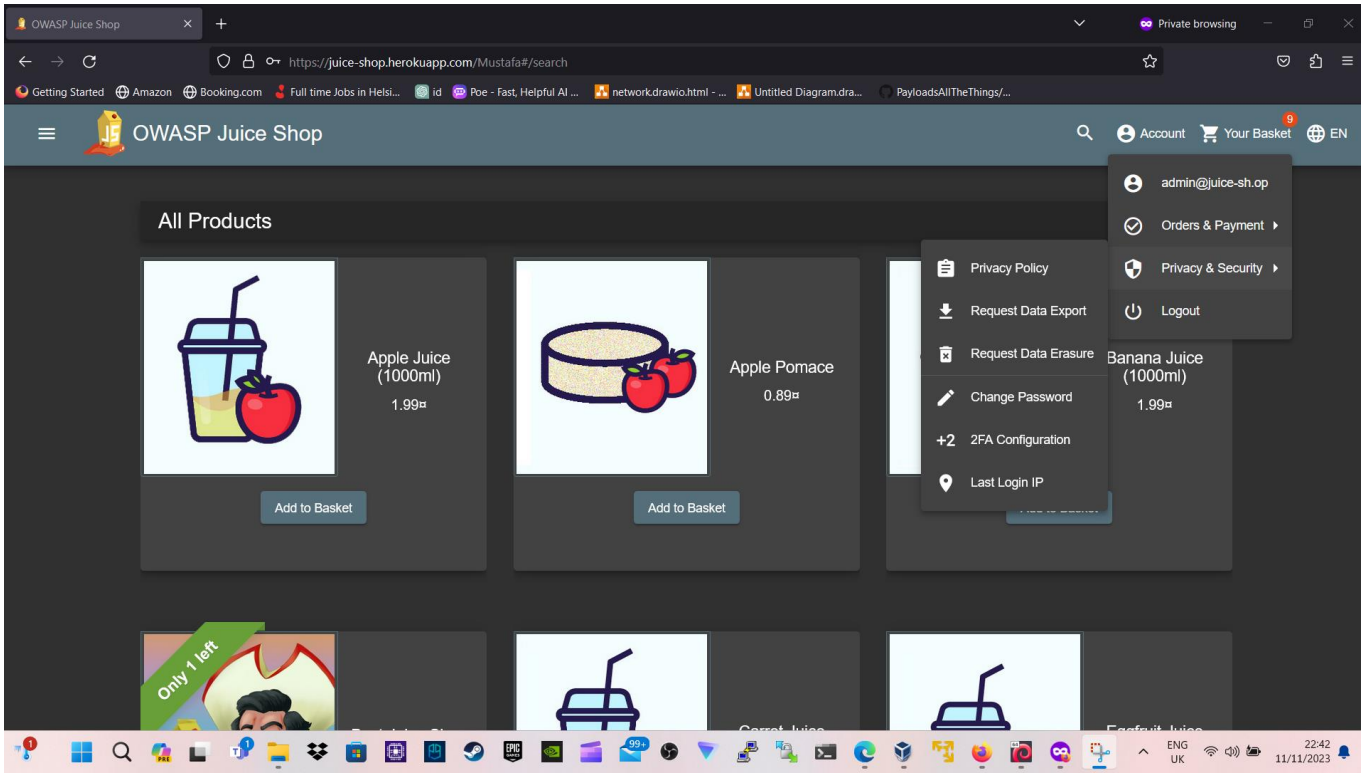
Multiple SQL injection vulns were discovered in the login functionality of the application. These vulns allow an attacker to bypass login screens and gain unauthorized access as an administrator!! compromising the confidentiality and integrity of sensitive information.

1.Scope: The assessment focused on the login functionality of the Juice Shop application.

2.Methodology: SQL injection attacks were performed by injecting malicious SQL queries into the email and password fields during the login process.

3. Vulnerability Details:

- **Screenshots:**



6. Proof of Concept (POC):

1. open the log in screen 2.

2. in email filed type `' or 1=1--`

3. Type any random pass in password section

4. hit enter

5. you going to logged in as Admin. The following SQL injection payloads were successfully used to bypass login screens and **gain administrative access**: `' or 1=1--`

4. Risk Assessment:

- **Impact: High**
- **Likelihood of Exploitation: High**
- **Potential Consequences: Unauthorized access, data manipulation, and exposure of sensitive information.**

5. Recommendations:

- Immediate patching of the SQL injection vulnerabilities.
- Implementation of input validation and parameterized queries.
- Regular security assessments and penetration testing to identify and address potential vulnerabilities.
